

Brass Drain Valve

One of the components, among many, that differentiates Bradford White from other manufacturers is our brass drain valve. Because of customer requests and an on-going effort to enhance our product offering, we introduced a durable and tamper proof low restriction brass drain valve. This design allows the installer to drain the tank faster, resulting in a reduction in service time.

These drain valves are utilized on every Bradford White water heater and feature a ball valve design, brass body, and straight design for ease of hose hookup. There is a unique BWC and cavity size (1, 2, or 3) engraving on each side of the valve.
